**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

1. Claims 7, 8 are rejected under 35 U.S.C. 102(e) as being anticipated by Bassler et al

Bassler et al (US 6,379,184) disclose (Fig. 2, 3,6) an apparatus comprising

a housing (130)

a plurality of signal (140) and ground (150) contacts exposed from said cavity, said signal contacts being arranged in differential pairs

an impedance tuner (112).

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 9 –10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bassler et al in view of Fogg et al

Bassler et al disclose all of the limitations except for an impedance adjusting insert.

Art Unit: 2833

Fogg et al (US 5,975,960) disclose an impedance adjusting insert (32).

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to provide Bassler et al connector with the impedance adjusting insert, as taught by Fogg et al, to optimize impedance characteristics of the connector.

#### ***Allowable Subject Matter***

Claim 1-6, 11-19 allowed.

No prior art has been found to anticipate or render obvious the presently claimed subject matter.

Specifically, none of the prior art of record discloses the combination of the limitations presented including the structural features of the impedance tuner used for the specific arrangement of the signal and ground contacts with regard to the tuner and the impedance adjusting insert.

#### ***Response to Arguments***

Applicant's arguments filed 06/23/2003 have been fully considered but they are not persuasive.

With regard to claim 7, Applicants argue since, in the prior art (Bassler), the signal terminals and ground terminals are located on different surfaces of the housing, the signal terminals, according to Applicants, are not separated from the ground terminals by the grooves in either surfaces.

However, in the invention and in the prior art, the ribs (formed by the walls of the grooves in the prior art) are utilized to keep the respective contacts in the fixed positions with the signal contacts being separated from the ground contacts. Since claim 7 does not claim that the signal terminals and ground terminal are located on the same surface of the housing, the rejection of the claim seems to be proper.
